

The top four countries with the highest average of malaria related deaths are Tanzania, Angola, Congo and Kenya. I hovered over each country with darker shading to see the average number of deaths per year. Tanzania showed 11,201 deaths, Angola displayed 11,469, Congo displayed 15,203 and Tanzania showed 27,896.

How have the number of malaria deaths changed over time in Kenya?

The average number of malaria deaths in Kenya is about 95% more than the African average. From the dashboard, I clicked on Kenya on the map and hovered over the country average line, this showed the average of malaria related deaths as 27,896. Then I hovered over the Africa average line which showed 1,303.

How have the number of malaria deaths changed over time in **Kenya**?

Deaths per year due to malaria in Kenya have decreased since 2011. From that dashboard, I clicked on Kenya on the map, this showed deaths due to malaria for each year from 2000 to 2014. Before 2011, there were 25,000 or more deaths per year. Starting in 2011, deaths decreased to approximate 600-700 per year.
